

JGI and Cetova Form Partnership to Facilitate Reporting and Enhance Business Intelligence for Lawson Customers

Rochelle Park, NJ, and Jersey City, NJ, April 22, 2010 - JGI, a business and technology consulting firm headquartered in Rochelle Park, NJ, is pleased to announce a partnership with Cetova Corp., a provider of Corporate Performance Management Software. Together, the two companies are developing and marketing solutions that will enhance the Reporting and Analysis needs of Lawson Software customers nationwide.

JGI and Cetova have adapted Cetova's reporting and querying tools to greatly complement the relational and multi-dimensional analysis needs of Lawson users. Cetova's solutions sit on top of the Lawson ERP system, quickly and easily integrating with all system data. This gives Lawson end-users additional functionality with ad-hoc reporting, resulting in more efficient and effective business intelligence solutions for both Lawson users and JGI clients.

"We've been in the Lawson business for over a decade and understand the analytical needs of our customers," said George DiGrandi, CEO of JGI. "This add-on solution will be more robust, less costly and much easier to implement than anything that's hit the Lawson market thus far."

John Lambrianakos, Cetova's VP of Product Management and Marketing, stated: "We are greatly looking forward to partnering with JGI. In addition to traditional reports generated by the IT department, our tools will bring a new dimension to Lawson reporting. Through the web and Excel, end-user analysts can drag and drop reporting parameters to get information on the fly. It's a real win-win for everyone."

The joint offering is available immediately to Lawson customers. More information can be found at www.JGInfo.com.
